

Week 3 3.4 Note

1. Extra R Commands

- Code Blocks:
 - Add `eval = F` in ````{r}` to let RStudio not run the code inside
- Functions:
 - `summary()`: List all numerical summaries of the variable inside, including `Min.`, `1st Qu.`, `Median`, `Mean`, `3rd Qu.`, `Max.` in order.
 - `Table()`: Create a contingency (frequency) table of the variable inside.
 - `getwd()`: Check where the current working directory is
 - `read.csv()`: Import data from a url or a path to local folder (both end with "xxx.csv")
